

**9.0 APPENDIX**

---

The Executive Summary from the hazardous material reconnaissance and record review for the USH 8 Project, I.D. No. 1570-32-00, which was completed in March 2003, is duplicated below.

**1.0 EXECUTIVE SUMMARY**

1.01 Project Description

The project corridor on USH 8 begins at STH 35 in Polk County and ends at the Red Cedar River near CTH O in Barron County. This is a preliminary study to assess areas of potential environmental concerns along the corridor and potential bypass routes. The study area consists of a 1/4-mile radius along USH 8. The search radius was extended 1 mile north and 2 miles south around Turtle Lake and 2 miles north and 2 miles south around Barron to include areas for potential bypass routes.

1.02 Potential Sites of Concern

Potential sites of concern are discussed in Section 3 and listed on Table 4.01-1. Because construction and acquisition activities are not known, all of the sites identified are assumed to have the potential for environmental concern and may warrant additional Phase 1 or Phase 2 investigation. Approximately 116 sites of concern were identified. A "Potential Risk" column was included on Table 4.01-1 to rank the sites with regard to the potential for environmental issues that may impact the project. Of the 116 sites identified, 17 were ranked High risk, 20 were Medium risk, and the remaining 79 were rated as Low risk. The majority of sites with Medium and High risk rankings were located in or near Barron with direct access to USH 8.

1.03 Recommendations

We recommend further evaluation of all sites identified in this report when more information on design, acquisition, and construction activities is known. Potential sites of concern should be eliminated based on right-of-way (R/W) acquisition and excavation activities. Site visits and owner interviews should be conducted on those sites affected by acquisition and excavation activities to determine if a Phase 2 investigation is warranted.

TABLE 4.01-1

SITES WITH POTENTIAL ENVIRONMENTAL CONCERNS

ECOSEARCH SITE NOS.	PHASE 1 SITE NOS. (sites not identified by EcoSearch)	SITE NAME	SITE LOCATION	PRIMARY POTENTIAL CONCERN(S)	SOURCE (S)	POTENTIAL RISK
Township of St. Croix Falls						
1.		Spill Site	Balsam Lake	Spills	EcoSearch, and DNR	Low
2.	A	A Residence	USH 8	Abandoned vehicles on property	RV	Low
3.	B	A Business	USH 8	Possible vehicle repair facility, abandoned vehicles on property	RV	Low
4.	C	A Business	USH 8	Possible vehicle repair facility	RV	Low
Township of Balsam Lake						
5.	D	A Residence	USH 8	Abandoned vehicles on property	RV	Low
6.	248	Landfill	Town of Balsam Lake	SWF	EcoSearch, DNR	Low
Township of Apple River						
7.	E	A Business	Town of Apple River	Possible fill areas located on property	RV	Low
8.	F	Farmstead	USH 8	AST	RV	Low

Re: US 8 EIS Hazardous Material Assessment Addendum

Dear Ms. Grumdahl:

An additional BRRTs and Department of Commerce (COMM) search has been conducted for the US 8 EIS project in the area of the Deer Lake Far Southern Realignment Alternative. The Deer Lake Far Southern Realignment alternative was added to the list of alternatives after the completion of the Phase 1 Hazardous Material Assessment. Some of the database search radii from the First Search Report that was ordered for the project corridor do not include the Deer Lake Far Southern Realignment. Database searches not included were:

- ERNS- Emergency Response Notification System
- RCRA generator
- Spills
- RST- Registered Storage Tanks.

BRRTs and Department of Commerce were searched for 120th Avenue, 122nd Avenue, and 170th Street. Two UST sites were found in the area of the Deer Lake Far Southern Alternative. The two UST sites were about 0.25 mile and about 0.75 miles from the corridor, are not expected to require further investigation. No other sites from the additional search were found.

Sincerely,

STRAND ASSOCIATES, INC.
